

Js Test

// 1. Create variables of different data types (string, number, boolean) and print their types using typeof.

```
let name = "Barani";
```

```
let age = 19;
```

```
let isStudent = true;
```

```
console.log(typeof name);
```

```
console.log(typeof age);
```

```
console.log(typeof isStudent);
```

// 2. Write a function that accepts two numbers and returns the larger number.

```
function findLarger(a, b) {
```

```
  if (a > b) {
```

```
    return a;
```

```
  } else {
```

```
    return b;
```

```
  }
```

```
}
```

```
console.log(findLarger(10, 20));
```

// 3. Given an array of numbers, find the sum of all elements without using built-in sum methods.

```
const numbers =[1, 2, 3, 4, 5];

let sum = 0;

for (let i = 0; i < numbers.length; i++) {
    sum += numbers[i];
}

console.log(sum);
```

// 4. Write a program to remove duplicate values from an array using Set.

```
const arr = [10, 20, 30, 40, 50];

const uniqueArr = [...new Set(arr)];

console.log(uniqueArr);
```

// 5. Create a Map containing student names and marks. Display all keys and values using a loop.

```
const students = new Map([

    ["dani", 85],

    ["deepak", 92],

    ["nandha", 78]

]);

for (let [name, marks] of students) {

    console.log(name + ": " + marks);

}
```

```
}
```

// 6. Write a program to count the number of vowels in a given string.

```
function countVowels(str) {  
  const vowels = "aeiouAEIOU";  
  let count = 0;  
  for (let char of str) {  
    if (vowels.includes(char)) {  
      count++;  
    }  
  }  
  return count;  
}  
console.log(countVowels("Hello World"));
```

// 7. Use string methods to reverse the word 'JavaScript'.

```
const word = "JavaScript";  
const reversed = word.split("").reverse().join("");  
  
console.log(reversed);
```

// 8. Using Math functions, find the square root of 144 and round 12.78 to the nearest integer.

```
console.log(Math.sqrt(144));  
console.log(Math.round(12.78));
```

// 9. Write a program that checks whether a number is even or odd using operators.

```
function checkEvenOdd(num) {  
  if (num % 2 === 0) {  
    return "Even";  
  } else {  
    return "Odd";  
  }  
}  
  
console.log(checkEvenOdd(7));
```

// 10. Given an array of numbers, find the largest and smallest values using Math.max() and Math.min().

```
const nums =[10, 20, 30, 40, 50];  
  
const maxVal = Math.max(...nums);  
const minVal = Math.min(...nums);  
  
console.log("Max: " + maxVal + ", Min: " + minVal);
```
